METROPOLITAN DISTRICT

Proud to be your area water provider

Tools to Help You Maintain Your Potable Water System

TCVMD recommends checking your water system at least once a year to ensure proper maintenance and that you, and everyone living in the home, are familiar with the system. Located on our website, www.toddcreekvillage.org > Newsletters > **Your Property's Potable Water System**, is a worksheet to fill out and file with other important documents.

After completing this exercise, you will have knowledge and documented records of many important items connected to your potable water system. You will find the location of your potable water meter, personal water shutoff valves, potable water hose spigots, all appliances connected to the potable water system on your property, and any personal modifications made to the system.

It is important to note that TCVMD potable water is regulated by state and federal mandates to meet and/or exceed safe drinking water requirements. No additional filtration, additions, etc., are necessary, but we recognize that every individual's water preference is unique. If you choose to alter TCVMD water in any way, we encourage you to properly maintain the system and follow all manufacturer guidelines.

While the District is happy to provide this form to guide you in becoming more acquainted with your potable water system, this system is the responsibility of the property owner and any requests from District staff to locate these items may result in a service charge.

Thank you for taking the time to become a more knowledgeable water user and help everyone who will occupy the property, now and in the future.

Transparency Notice: Board meetings are held the second Thursday of each month at 2:00 pm via Zoom. The public is always welcome and encouraged to attend.
